About The Smarter Web Company

The Company owns and operates digital services businesses focused on web design, development and digital marketing. The Company serves more than 500 client websites across a diverse range of sectors and generates a significant and growing proportion of its revenue through long-term client relationships and retained service arrangements.

The Company's strategy combines the operation and acquisition of cash-generative businesses with a Bitcoin treasury policy designed to build long-term Shareholder value (the "Bitcoin Treasury Policy"). The Directors believe that Bitcoin will form a significant part of the future global financial system and have therefore adopted this Bitcoin Treasury Policy under which Bitcoin is the Company's primary treasury reserve asset.

The primary objectives of the Bitcoin Treasury Policy are to support the Company's overall capital position and to seek to increase Bitcoin per Ordinary Share over time, with a secondary objective of increasing the total number of Bitcoin held on the Company's balance sheet. The Directors believe that growing Bitcoin per share while simultaneously increasing the scale of the Company's Bitcoin holdings creates a stronger balance sheet and supports the Company as a whole in providing a more attractive investment proposition for existing and prospective Shareholders.

As the strength of the balance sheet increases, the Company believes it can access larger pools of capital on favourable terms, provided such capital raising activity remains accretive to Bitcoin per Ordinary Share. This creates a cycle in which capital can be deployed to pursue strategic acquisitions and acquire additional Bitcoin that strengthen the Company's operating businesses, increase revenues and cash generation, and further enhance the overall strength of the Company.

The Ordinary Shares are admitted to listing on the equity shares (commercial companies) category of the Official List and to trading on the Main Market of the London Stock Exchange under the ticker SWC and are quoted on the OTCQB Venture Market in the U.S. under the ticker TSWCF. The Ordinary Shares can also be traded on the Frankfurt Stock Exchange under the ticker 3M8.

The Preferred Shares are admitted to listing on the non-equity shares and non-voting equity shares category of the Official List and to trading on the Main Market of the London Stock Exchange under the ticker MORE.

The Directors of the Company accept responsibility for the contents of this announcement.

Important Notice

The Smarter Web Company Plc holds treasury reserves and surplus cash in Bitcoin. Bitcoin is a type of cryptocurrency or cryptoasset. Whilst the Board of Directors of the Company considers holding Bitcoin to be in the best interests of the Company, the Board remains aware

that the financial regulator in the UK (the Financial Conduct Authority or FCA) considers investment in Bitcoin to be high risk. An investment in the Company is not an investment in Bitcoin, either directly or by proxy. However, the Board of Directors of the Company consider Bitcoin to be an appropriate store of value and growth for the Company's reserves and, accordingly, the Company is materially exposed to Bitcoin. Such an approach is innovative, and the Board of Directors of the Company wish to be clear and transparent with prospective and actual investors in the Company on the Company's position in this regard.

The Company is neither authorised nor regulated in the conduct of its business by the FCA. And there is currently limited regulation of cryptocurrencies (such as Bitcoin) in the UK. As with most other investments, the value of Bitcoin can go down as well as up, and therefore the value of the Company's Bitcoin holdings can fluctuate. The Company may not be able to realise its Bitcoin exposure for the same as it paid in the first place or even for the value the Company ascribes to its Bitcoin positions due to these market movements. An investment in the Company is not protected by the UK's Financial Ombudsman Service or the Financial Services Compensation Scheme.

Nevertheless, the Board of Directors of the Company has taken the decision to invest in Bitcoin, and in doing so is mindful of the special risks Bitcoin presents to the Company's financial position. These risks include (but are not limited to): (i) the value of Bitcoin can be highly volatile, with value dropping as quickly as it can rise. Investors in Bitcoin must be prepared to lose all money invested in Bitcoin; (ii) the Bitcoin market is largely unregulated. There is a risk of losing money due to risks such as cyber-attacks, financial crime and counterparty failure; (iii) the Company may not be able to buy or sell its Bitcoin at will. The ability to buy or sell Bitcoin depends on various factors, including the supply and demand in the market at the relevant time. Operational failings such as technology outages, cyber-attacks and comingling of funds could cause unwanted delay; and (iv) cryptoassets are characterised in some quarters by high degrees of fraud, money laundering and financial crime. In addition, there is a perception in some quarters that cyber-attacks are prominent which can lead to theft of holdings or ransom demands. The Board of Directors of the Company does not subscribe to such a negative view, especially in relation to Bitcoin. However, prospective investors in the Company are encouraged to do your own research before investing.

BTC Yield is a key performance indicator (KPI) that reflects the percentage change in the ratio of Total Bitcoin Holdings to Shares In Issue (Fully Diluted) over a given period. The Company uses BTC Yield to assess the performance of its Bitcoin acquisition strategy, which is intended to be accretive to shareholders.

Quarter-to-Date BTC Yield specifically measures this percentage change from the end of the third calendar quarter (30 September 2026) up to the present date.

Diluted Market Cap is defined as the Company's current share price multiplied by the fully diluted shares in issue.

Enterprise Value is defined as the sum of the Diluted Market Cap and our total notional debt, less our treasury cash balance.

Net Asset Value is defined as the sum of the market value of Bitcoin held and our treasury cash balance, less total notional debt.

Fully Diluted EV vs. BTC Value is calculated as Fully Diluted Enterprise Value / (Total BTC Holdings * Current BTC Market Price).

Gross Sats per Fully Diluted Share is calculated as Total Bitcoin held (in Sats) / Fully Diluted Shares

Net Sats per Fully Diluted Share is calculated as (((Total Bitcoin Value + Treasury Cash Balance – Total Debt) / Bitcoin price) / Fully Diluted Shares) x 100,000,000
